Congratulations, you passed.

Total score: 21 out of 21, 100%

Question Feedback

Question

1 of 16

Breaker systems aid in the removal of filtercake and potential causes of formation damage to the reservoir, in order to improve productivity or injectivity of treated wells.

- ☒ True
- ☐ False

1 out of 1

Question

2 of 16

Fill the list, explaining the capabilities of the different breaker systems used in the oil industry

Acids	Can remove both polymers and calcium carbonate ▾
Chelating Agents	Can remove only calcium carbonate ▾
Enzymes	Can remove only polymers ▾

3 out of 3

Question

3 of 16

Acids can be placed in the reservoir to remove the damage caused by drilling and completion fluids

- ☒ True
- ☐ False

1 out of 1

Question

4 of 16

The most commonly used acid in the oil industry as cake breaker is:

- ☐ Boric acid
- ☐ Acetic acid
- ☐ Lactic acid
- ☒ Hydrochloric acid
- ☐ Formic acid

1 out of 1

Question

5 of 16

Select some of the disadvantages of using traditional acid breakers

- ☐ Uneven distribution in the wellbore
- ☐ Risky operation from HSE perspective
- ☐ Requires special equipment
- ☐ Potential wormholing
- ☒ All of the above

1 out of 1

Question

6 of 16

Traditional acid breakers can ensure the complete removal of the filtercake

- ☐ True
- ☒ False

1 out of 1

Question

7 of 16

The BaraNFlow™ breakers offer a delayed reaction, providing uniform distribution, reducing HSE risks, and preventing the threat of corrosion and formation damage

- ☒ True
☐ False

1 out of 1

Question

8 of 16

The BaraNFlow™ breaker can only be used with water based fluid filtercakes

- ☐ True
☒ False

1 out of 1

Question

9 of 16

From the HSE perspective, one of the advantages of the BaraNFlow™ system is that it does not require special handling equipment on surface

- ☒ True
☐ False

1 out of 1

Question

10 of 16

The BaraNFlow™ reaction time is always the same, which limits it's range of application

- ☐ True
☒ False

1 out of 1

Question

11 of 16

Packer fluids  are fluids that are deposited in the annular section between the outer casing and production pipe (tubing) of a well above a packer.

1 out of 1

Question

12 of 16

One of the functions of packer fluids is to minimize the hydrostatic pressure necessary to control the well in case of a packer failure or leaks

- ☐ True
☒ False

1 out of 1

Question

13 of 16

List the main packer fluid characteristics:

- ☒ Must not cause corrosion
- ☒ Must not damage the producing formation
- ☐ Must promote differential pressures
- ☒ Must remain pumpable
- ☐ Must deteriorate packer elastomers
- ☐ Must degrade with time or temperature
- ☒ Must be chemically and mechanically stable

4 out of 4

Question

14 of 16

Drilling fluids are desirable as packer fluids

- ☐ True
☒ False

1 out of 1

Question

15 of 16

Given the right conditions, a completion fluid can be used as a packer fluid

- ☒ True
☐ False

1 out of 1

Question

16 of 16

1. The

N-SOLATE ▼

1. packer system are unique high performance insulating packer fluids designed to reduce undesired heat flow by controlling both conduction and convection.
